

Data Dictionary - Fresh Fare Distribution Co.

Customers Table

- CustomerID (Integer): Unique identifier for each customer. Example: 1001
- BusinessName (String): Legal name of the customer business. Example: "Metro Cafe"
- ContactPerson (String): Primary contact person's name. Example: "John Smith"
- ContactEmail (String): Primary contact email address. Example: "john@metro.com"
- ContactPhone (String): Contact phone number. Example: "555-1234"
- Address (String): Street address of the business. Example: "123 Main St"
- City (String): City where business is located. Example: "Los Angeles"
- State (String): State code where business is located. Example: "CA"
- CustomerType (String): Business category. Values: Restaurant/Cafe/Hotel/Catering
- CreditLimit (Decimal): Maximum credit amount allowed. Example: 10000.00

Products Table

- ProductID (Integer): Unique identifier for each product. Example: 2001
- ProductName (String): Name of the product. Example: "Fresh Milk"
- Category (String): Product category. Example: "Dairy"
- UnitOfMeasure (String): How product is measured.
- Values: KG/L/Units
- UnitPrice (Decimal): Selling price per unit. Example: 2.50
- StorageType (String): Required storage condition. Values: Cold/Frozen/Ambient
- MinTemperature (Integer): Minimum storage temperature in °C. Example: 2
- MaxTemperature (Integer): Maximum storage temperature in °C. Example: 8
- SupplierID (Integer): ID of the supplier. Example: 3001
- ReorderPoint (Integer): Minimum quantity to trigger reorder. Example: 100
- UnitCost (Decimal): Cost price per unit. Example: 1.75

Orders Table

- OrderID (Integer): Unique identifier for each order. Example: 4001
- OrderDate (DateTime): Date and time order was placed. Example: "2023-01-15"
- CustomerID (Integer): Reference to customer placing order. Example: 1001
- OrderStatus (String): Current status of order. Values: Completed/In Progress/Cancelled
- PaymentTerms (String): Payment terms for order. Values: Net 30/Net 60/COD
- TotalAmount (Decimal): Total order amount. Example: 525.75
- ExpectedDeliveryDate (DateTime): Expected date of delivery. Example: "2023-01-17"

OrderDetails Table

- OrderDetailID (Integer): Unique identifier for each line item. Example: 5001
- OrderID (Integer): Reference to parent order. Example: 4001
- ProductID (Integer): Reference to product ordered. Example: 2001
- Quantity (Integer): Quantity ordered. Example: 10
- UnitPrice (Decimal): Price per unit at time of order. Example: 2.50
- DiscountPercent (Decimal): Discount applied (as decimal). Example: 0.10
- TotalLineAmount (Decimal): Total amount for line item. Example: 22.50

Deliveries Table

- DeliveryID (Integer): Unique identifier for each delivery. Example: 6001
- OrderID (Integer): Reference to order being delivered. Example: 4001
- DeliveryDate (DateTime): Scheduled delivery date. Example: "2023-01-17 09:00"
- VehicleID (Integer): ID of delivery vehicle. Example: 101
- DriverID (Integer): ID of assigned driver. Example: 201
- DeliveryStatus (String): Current delivery status. Values: Delivered/In Transit/Failed
- ActualDeliveryTime (DateTime): Actual time of delivery. Example: "2023-01-17 08:45"
- TemperatureLog (Decimal): Temperature reading during delivery in °C. Example: 4.5
- DeliveryNotes (String): Additional delivery information. Example: "Delivered to back door"

InventoryTransactions Table

- TransactionID (Integer): Unique identifier for each transaction. Example: 7001
- ProductID (Integer): Reference to product. Example: 2001
- TransactionDate (DateTime): Date of transaction. Example: "2023-01-15 10:30"
- TransactionType (String): Type of movement. Values: Inbound/Outbound
- Quantity (Integer): Quantity moved (+ve for in, -ve for out). Example: 100
- UnitCost (Decimal): Cost per unit at time of transaction. Example: 1.75
- WarehouseID (Integer): ID of warehouse. Example: 301
- BatchNumber (String): Unique batch identifier. Example: "B000123"
- ExpiryDate (Date): Product expiry date. Example: "2023-04-15"

Additional Notes:

- All monetary values are in USD
- All temperature values are in Celsius
- All timestamps are in local timezone

Data Constraints:

1. All ID fields are non-nullable and positive integers
2. All monetary values are non-negative decimals with 2 decimal places
3. Dates must be valid and not in the future (except ExpectedDeliveryDate)
4. Temperature logs must be within the product's Min/Max temperature range
5. Quantities must be non-zero integers
6. Discount percentages must be between 0 and 1
